

## WHMIS 2015: How pictograms compare to hazard symbols

In general, pictograms (below right) are similar to WHMIS 1988 hazard symbols (below left). Many of the symbols inside the borders are almost the same. But there are some new symbols. (See the symbols in the “Health hazard,” “Exploding bomb,” “Environment,” and “Exclamation mark” pictograms, highlighted by dashed lines (below right). And two symbols have been retired. (See the “Materials causing other toxic effects” and “Dangerously reactive material” hazard symbols, highlighted by dotted lines below left). In all but one case (“Biohazardous infectious materials”), the pictogram borders are red and diamond-shaped. And most pictograms are assigned to multiple hazard classes and categories.

## Record of meeting

Project				
Address		City	Province	Postal code
Employer		Supervisor		
Date (yyyy-mm-dd)	Time		Shift	
Number in crew		Number attending		

### Other safety issues or suggestions made by crew members

### Record of those attending
